

Nook Android App: My Files and downloads

Posted by Amy West - 2011/06/06 08:02

I have CM7 running on my NookColor and I installed the Nook Android App. But I've got a couple of problems:

- 1) It can't find my non-BN content under My Files. Do I have to have that material on the internal memory? And if so, where?
- 2) It will only read my BN content when the WiFi is on. Is this normal? Do I not have something set right? My husband has the Nook iPad App and says it doesn't behave this way.

Hi..This is Angelina from India..As looking into your problem carefully i seem to have a doubt that are you sure that you have installed the Nook Android App properly..Because sometimes the wrong installation step may cause you with this problem..

I agree many android apps developers face this issue. You should try with your internal memory first.
